## Ring Size Guide

For optimal outcomes, it is necessary to access the printing settings prior to printing and verify that the page scaling is disabled in the print dialogue box. The ring size chart should be printed on an A4-sized paper (210x297mm). To confirm accurate printing of the Ring Size Chart, take a ruler to measure the sample below. The measurement should precisely equal 2cm.

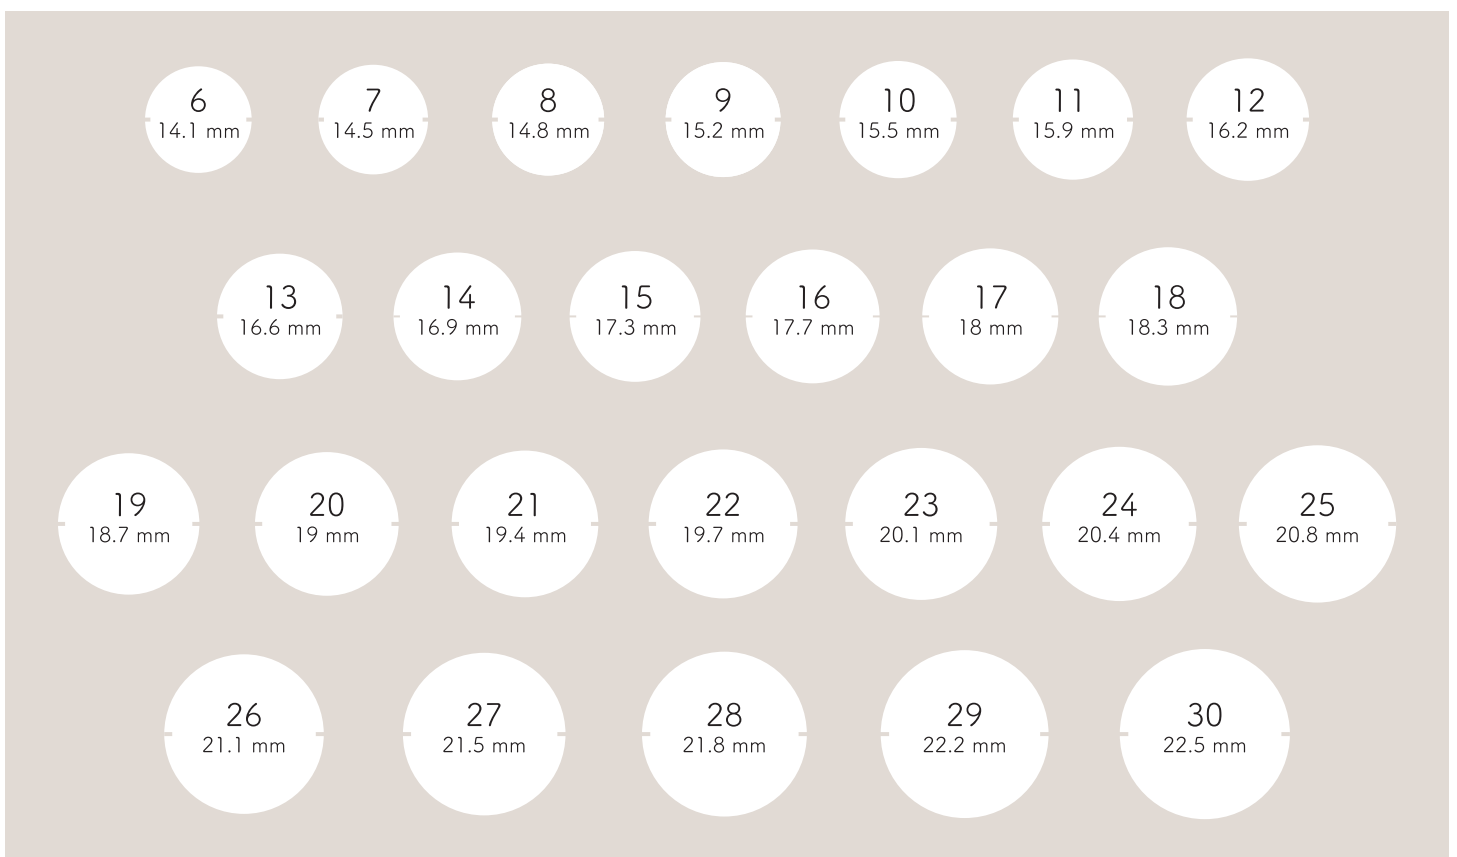

### Tips

Finger size can vary based on the time of day and weather. For the most precise measurement, measure your finger at different times of day and on multiple occasions to compare.

Refrain from measuring your fingers when they are cold or wet since they tend to be at their smallest during such conditions.

## 1 Measure by Matching Your Ring

Find a ring that fits you well and align the inside of that ring with one of the circles provided below. The correct size will be indicated when you only see the white circle within your ring, without any colour space showing. If your measurement falls between two sizes, it is advisable to select the larger size.

These measurements refer to the inside diameter of the ring.

## 2 If it is a Gift

To determine the appropriate size for the ring you wish to purchase, you can borrow one of the recipient's rings with a similar width, ensuring it is not wider than 3mm. Then, refer to the Size Guide for accurate measurements.

It's important to note that the ring size may slightly vary depending on the specific style of the ring.

In cases where your ring measurement falls between two sizes, Oliver suggests opting for the larger size.
